25-02-2004

khanhlm250204@gmail.com

Liên Chiểu, Đà Nẵng

JPA: 3.15

Laguages: JLPT N3

Education

IT (Information Technology)

09/2022 - 09/2026 (Expected)

Đà Nẵng University of Science andTechnology (DUT)

Fourth - year student (2022 - now)

Technical Skills

Framework: Spring Boot, Nodejs, Express, ReactJS

Databases: MySQL, SQL server, MongoDB

Code Manager: Glt, Github

Software development: Clean Code Architecture, RESTful API, Docker, AWS EC2, Linux (Ubuntu) Operation & Networking basic

Summary

Final-year Information Technology student with hands-on experience in **Java, Spring Boot, MySQL, and RESTful API** development through academic and personal projects. Solid foundation in Object-Oriented Programming (OOP), backend development, and database design. Passionate about building scalable backend systems and eager to grow as a Java Developer in a professional environment.

Project

Project name: Housing rental service. 1/2025 - 5/2025

My Word: Backend & AI (Sentiment classification)

Description: a web application that simulates an online accommodation booking platform. Users can search, book, and manage their stays, while hosts can list, update, and manage their rental properties.

Key Features:

- User authentication & authorization (JWT)
- Online booking system with reservation management.
- Host dashboard for property management.
- Online payment system (VnPay,.).
- Real-time chat between guests, hosts and admin to discuss booking details.
- AI-based Review Classification: automatically categorizes guest reviews as positive, negative, or neutral, providing insights for both hosts and future guests.
- AI-powered Chatbot: to automatically answer frequently asked questions about pricing, amenities, and policies.

Technologies Used:

- **Frontend**: ReactJS, HTML, CSS, Tailwind, MUIv5.
- **Backend:** Spring Boot (Java), Spring JPA, Spring Sercurity(OAuth2)
- **AI & ML:** Ollama (Chatgpt), Transformer(BERT), OpenCV, Flask.
- **Database:** MySQL,MongoDB .
- **Deployment:** Docker,AWS.

Project name: Medical Supplies E-commerce 9/2025 - 12/2025

My Word: Backend & Image Processing

Description: A full-stack web application for managing and selling medical supplies and medicines. The system supports both doctors/admins and customers with product management, order handling, and AI-assisted medical suggestion features.

Key Features:

- **Admin/Doctor:** Manage products, review orders, view patient records, and receive AI-based disease suggestions.
- **Customer:** Register/login, search and view products, add to cart, checkout, and track order history.

- **AI Integration:** Suggest possible diseases using trained AI models when chatting with patients.
- **AI Image Classification:** Automatically recognize and classify medical supplies using deep learning models (Resnet50 & EfficientNet-B3)..

Technologies Used:

- **Frontend:** ReactJS, HTML, CSS, MUI.
- **Backend:** Spring Boot (Java), Spring JPA, Spring Security (OAuth2).
- **AI & ML:** PyTorch, Tensorflow, OpenCV, Flask.
- **Database**: Mysql, Redis
- **Deployment:** Docker, AWS EC2
